# AIR DOOR APPLICATIONS

Berner offers the most complete line of air doors available. No matter what your door needs may be, Berner has models accommodating 24" - 192" wide openings including service doors, shipping doors, customer entry doors, drive-up windows and cooler doors.

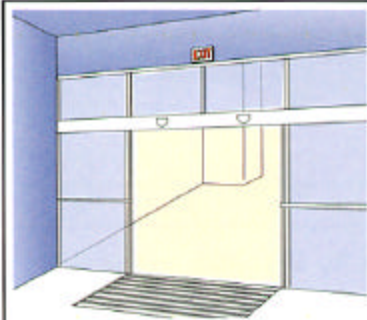

## OTHER QUALITY PRODUCTS AVAILABLE FROM BERNER INTERNATIONAL ...

### strip doors

**The economical solution to energy control.**

Berner Strip Doors are made of clear PVC material that retains its flexibility even in extremely cold conditions. These doors can be used to contain airborne contaminants, flying insects, and odors. They are an inexpensive way to hold back conditioned air for both customer and employee comfort.

### air entrance system

**An aesthetically pleasing solution for high traffic entrance ways.**

This innovative entrance system provides a recirculated air seal, through concealed duct work, effectively creating a barrier between indoor and outdoor temperature conditions. Open access, safety and energy efficiency are created out of thin air with Berner Air Entrance System. The Air Entrance System allows you to keep your doors open enticing people to enter your business.

### direct gas-fired door heaters

**Low cost alternative to heating open doorways.**

The Berner Gas-Fired Door Heater solves the problem of drafts or cold air from entering industrial buildings. The Berner unit is the ideal solution for facilities with negative air pressure. Engineered for versatility, the door heater can be mounted at any angle between horizontal and vertical to satisfy most applications.

### posi-flow fabric air diffusers

Posi-Flow Fabric Air Diffusion Ducts transfer and evenly distribute air to a room or an entire building in the most economical and efficient way. Tubing is used as a direct replacement for traditional sheet metal duct. Posi-Flow is installed in areas with open ceilings and is used for supply air only.
