

# Handling Plastic Pallets

ORBIS Plastic Pallets bring great efficiency and safety to many types of operation, with proper handling.

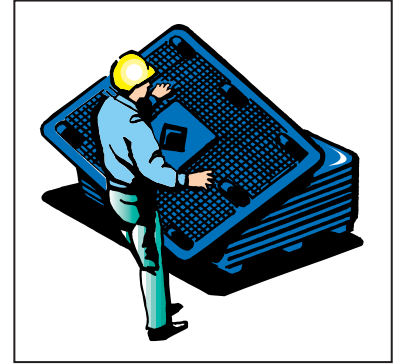

Always:

**Always** lift and tilt fork tines up while moving.

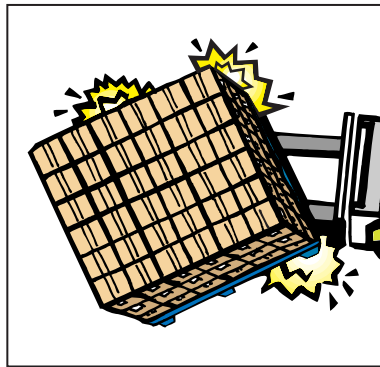

**Always** evenly distribute the weight of your load - build your load from the center out.

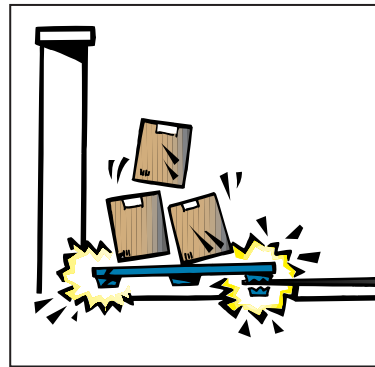

**Always** lift the pallet ergonomically.

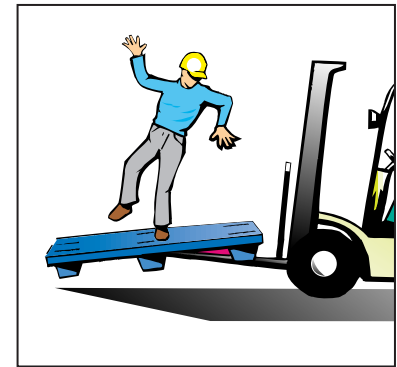

Avoid:

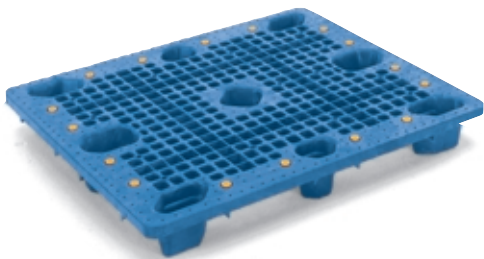

**Avoid** leg shear - completely remove fork tines from pallet before turning.

**Avoid** pushing pallet against walls or posts with the forklift to eliminate pallet damage.

**Never** stand on forklifted pallets.

Please work with your ORBIS Sales Representative to discuss your specific application requirements.

Performance characteristics vary with application.
