

pallets

Constructed of durable polyethylene, Sæplast pallets represent a secure investment for both transportation and storage requirements. Flexible in design, hard-wearing and easy to clean, they are an ideal replacement for wooden pallets, with all their inherent disadvantages. Easily handled by pallet jack or forklift, Sæplast pallets come in flat-top or raised-lip versions, and include features such as easy stackability and a non-skid rough surface (flat-top only) for added safety.

DP40F (flat top)

DP40R (with edges)

Type	Description	Outside dimensions			Weight
