

Storage Solutions

Selective Rack

Selective rack is designed for immediate load access of all pallets. Interlake's Interack-30™, with its patented wedge stud, Interlock and teardrop keyhole beam-to-frame connection, continues to set the industry standard in connection design. Narrow keyholes produce greater cross-sectional strength, increasing overall capacity and safety. Wedge studs draw the beam end plate firmly against the column creating the most rigid system available. While many competitors utilize an Interlake look-alike teardrop design using round studs, none have the unique flat-sided wedge stud which reduces stress in the keyhole area providing optimal strength and support. Interack-30 has an extensive line of accessories which allow you to customize a system to fit your needs.

Interlock™

Safety is the number one concern in warehouses, storage rooms and "big box" retail operations. Employee and customer safety was a primary focus when Interlake's engineers set out to design a beam connection unlike any other. Little training is required to understand the operation of the new Interlock™. The Interlock seats automatically into the column, locking securely into place when the beam is installed. No sliding parts! No additional pins or hardware! This positive automatic engagement guards against accidental beam displacement and exceeds RMI requirements of 1,000 pounds of upward force without failure.

Drive-in/Drive-thru Rack

Drive-in rack is an economical, high-density storage rack design. It requires fewer aisles, allowing up to 75% more pallet storage than conventional pallet rack. The placement of frames and reinforcing struts is computer calculated to match individual upright section requirements.

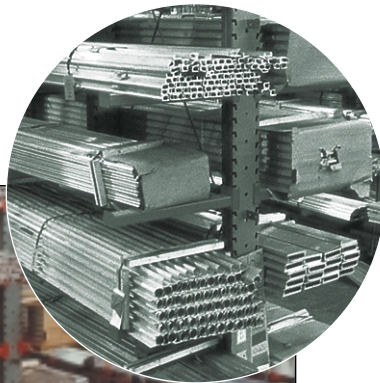

Drive-thru rack has the added benefit of first-in/first-out capabilities and allows for traffic tunnels to pass through on longer rows.

Carton Flow

Interlake's Selecta-Flo® 2000™ carton flow system delivers dramatic cost savings in order picking: 25% to 75% over static systems. Separate stocker and picker aisles and picking faces that are always fully stocked enhance the efficiency of your operation.

Efficient first-in/first-out rotation assures food distributors of product freshness and high visibility prevents out-of-stock situations. Our exclusive clipless track and guide system speeds assembly and reconfiguration. Steel-Axle Wheels more than double the wheel strength and provides 3-4 times the abuse resistance of other designs.

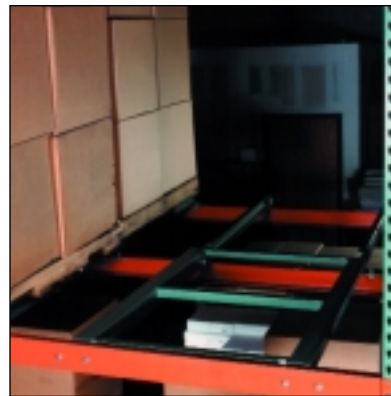

Cantilever Rack

Cantilever rack has no aisle uprights to limit the use of horizontal space making it ideal for long or bulky items like carpet, lumber, furniture or tubing. Our patented Lok-Joint features a pin locking system that provides the strongest and safest arm-locking method in the industry and makes our cantilever rack easy to assemble and easy to readjust. Accessories include drop-in steel decks and a spring-loaded entry guide system for safety and protection of both merchandise and the rack system.

Shallow Lane

A first-in/first-out retrieval system, shallow lane rack can double or triple capacity compared to conventional pallet rack designs. It's ideal for freezer warehouses, food distribution centers, or for storage of high-volume consumer goods. If your operation involves a significant amount of pallet or carton order picking, shallow lane can save you time, floor space and money.

Push Back Rack

This versatile two, three and four deep pallet flow system optimizes storage density for higher throughput product storage.

Push Back provides tighter stocking control, maximum space utilization and reduced product damage. Pallets are fed and retrieved from one aisle so that lift equipment is not required to reach or drive into the system. Pick times are reduced giving your throughput a productive push.

Interlake Express

Our quick ship program featuring 48-Hour guaranteed shipping of the most popular Interlake selective rack products and accessories, including wire deck and carton flow products. Warehouses in Lodi, CA, Kankakee, IL, Sumter, SC, and Matamoros, Mexico insure quick delivery and lower transportation costs.

From basic carton and pallet storage to the most complex order picking operations, no one offers a broader range of products and services to help customers reduce costs, increase sales, and improve productivity. We serve all industry segments including:

Warehouses and Distribution Centers

Everything from box and pallet storage to comprehensive integrated material handling systems.

Retail Stores

Custom rack systems that enhance aesthetics, improve customer safety and interface, and simplify re-profiling.

Manufacturing Plants

Systems for storing and handling raw materials and components as well as for maintaining product inventory. Control and software engineering to increase throughput and reduce production costs.

Archive and Record Storage Companies

High density storage for manual or automated retrieval; rack supported buildings to maximize storage space.
