

INSULATED BOXES

Keeping Things Cold When It Matters

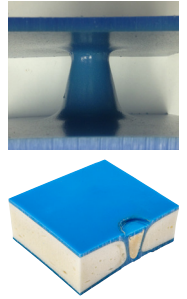

Made in the USA

Bonar insulated boxes are built to handle the roughest environments!

Bonar Plastics insulated fish boxes are manufactured using technology we've developed over many years of manufacturing insulated containers, with our mission being, "to provide the fishing industry with a better fish box value." The revolutionary "Wall-Lock Technology" provides superior structural integrity within the double-wall construction of a fish box, resulting in a better performing and longer lasting product. "Wall-Lock" connects the inner and outer walls of the fish box to prevent the common industry problem of "delamination," where the inferior foam separates and breaks down over time, so now customers can feel confident that their catch is safely protected from ice melting prematurely.
