Fly lights are an easy to implement, affordable solution to rid your restaurant of flying insects. But where should they be placed for the best results? Here are four key areas that are proven to catch the highest percentage of flying pests:

## FRONT OF THE HOUSE

**Near the public entrance to the restaurant:** Near the host station, just inside the doors, is the optimal location for a fly light. We recommend one of our sconce style traps, mounted just above eye level. It will blend in with the restaurant's décor and won't be noticeable to patrons. Also, be sure to point the fly light toward the inside of the restaurant. You want to trap flies that are already inside, not attract more bugs from the outside.

## BAR AREA

Many restaurant bar areas serve snacks, hors d'oeuvres and other menu items. A small, discrete, under counter light can help you control insects in this busy area. In addition, pay particular attention to areas where drinks are prepared. The build up of spillage from the mixing of drinks will create harbor for fruit flies. Treat these areas with Gardner's fruit fly control products.

## BACK OF THE HOUSE

**Food preparation area:** Flies are naturally attracted to food preparation areas and any nearby garbage storage areas. Because these locations are away from the public, appearance isn't as important. That means any of our "open-faced" fly lights will work well here.

**Just inside kitchen entrance:** Placing a fly light just inside the kitchen doors ensures that you trap as many insects as possible — before they can fly into the dining area and annoy patrons.

## BEST PRACTICES

- **DO...** Place the fly lights in public areas of the restaurant just above eye level. This ensures that customers won't see dead insects stuck to the glue board.
- **DO...** Replace the bulbs in each of your fly lights every 9-12 months. Each bulb has a chemical coating that maximizes the amount of UV light it transmits. As the bulb ages, this coating wears out, diminishing the trap's effectiveness.
- **DO...** Replace the glue boards in each of your fly lights once a month.
- **DON'T...** Place fly lights in areas with bright lighting, such as large windows. Other light sources compete for the bugs' attention, and will diminish the fly light's effectiveness.

# FRUIT FLY CONTROL/SMALL FLY CONTROL

**READY  
TO USE**

**CONCENTRATE**

Concentrate mix ratio:  
1:9 with water for  
maximum effectiveness.  
Can be used in any  
sprayer, foamer with  
no additive needed.  
Just mix with water.

## FRUIT FLY CONTROL
