Silent Buggies

The lightweight and silent solution

With their strong, triple walled construction, Sæplast wheeled buggies are ideally suited for handling both wet and dry goods. Their sturdy undercarriage construction, nylon wheels, stainless-steel axles and ergonomic handles have been designed for easy manoeuvrability and handling.

With a volume of 200 L, each buggy has the option of its own lid and with stainless steel dumping brackets or without.

The Sæplast PE Buggies were developed to meet the strictest requirements of the food industry and the MS200/MS201 meet the German standard DIN 9797.

Compared to stainless steel, they offer a wide range of advantages when it comes to noise reduction, handling weight and cleaning just to mention a few of the benefits of the Sæplast buggies.

The Sæplast PE Buggies are ideally suited for the handling of wet and dry meat products and a wide variety of other food products. They are built to withstand the harshest conditions and rough handling in food processing especially due to the proven triple wall construction feature.

The ergonomically designed handle provides a high degree of manoeuvrability and is a key employee safety initiative allowing workers to remain standing more upright during handling.

The buggy pointed slope directs the dumping outflow in the desired direction.

The Sæplast PE Buggies absorb noises, the sound level during dumping is diminished by 17dB. and the noise produced during rolling is negligible. Our buggies help to reduce the risk of hearing disorders.

The versatile buggies are available in various colours enabling you to have dedicated buggies for different colour coded zones within your plant.
